

STREET AND AREA LIGHTING

CHARACTER OF SERVICE

Service under this rate is available for street and area lighting service installations, maintenance and use of energy, and traffic control lighting service provided the customer furnishes the equipment. Customers taking service under this rate schedule are responsible for paying both Distribution Service and Stranded Cost.

RATES

The rate for continuous service shall apply when the facilities are installed for continuous year round use. The rate for periodic service shall apply when the facilities are installed for occasional or periodic service, provided that such service shall not be available for installations where service would be rendered for less than five months per year.

Mercury vapor lighting service is limited to existing installations except where a minimal quantity of new luminaires is requested, as an extension of a lighting plan, to continue a color scheme. New installations of mercury vapor lighting may be delayed pending availability of the necessary fixtures.

Incandescent service, except for traffic control purposes, will not be available after March 31, 1987.

RATES FOR REGULAR MONTHLY SERVICE

Rated Lamp Watts	Rated Input Watts	Rated Lumens	Distribution Monthly Rate Per Luminaire	Stranded Cost Monthly Rate Per Luminaire	Transmission Monthly Rate Per Luminaire	Bundled TD&S Monthly Rate Per Luminaire
